Excerpt: .the valley of the Arkansas river; reaching its best development in eastern North Carolina. In this State (fig. 34), where it attains an average height of 50 to 70, and an average diameter of 2 to 3 feet, it is found on a great variety of soils and situations from the sea level to an elevation of 1,000 feet. The original growth is on moist deep soil, but the second growth has sprung up largely in old fields, often replacing the long-leaf pine on the moister loamy lands. It bears seed generally every year, and abundantly once in 2 or 3 years, but much of the seed is imperfect. Seedlings are very common on rather moist soil in abandoned fields. The rate of growth, under sufficient light, is very rapid. The slender light green leaves are usually in threes, with rather long close sheaths....
